Online continuing medical education (CME) as an incentive for guideline implementation for German physicians

Medical knowledge network evidence.de of Witten/Herdecke University
*Department of Primary Care of Witten/Herdecke University

The available amount of information in medicine is increasing exponentially. Suitable strategies are necessary to separate the “wheat from the chaff” and subsequently transfer relevant knowledge into daily medical practice. Evidence based medicine (EbM) and clinical practice guidelines (CPGs) should reflect the contemporary scientific standard of knowledge.

In view of these challenges the knowledge network of the medical faculty of the University Witten/Herdecke is focusing on two different tasks:

1. It provides evidence based medical guidelines in a format that is meant for easy access and use in daily practice.
2. It scientifically explores different ways of presenting and transferring evidence based guidelines in order to develop better and easier ways of implementation.

“Wheat and chaff”

In one year more than 1300 physicians used the platform. 80% of them gave a positive feedback in an online evaluation questionnaire (figure 2). A standardized feedback allows interindividual comparisons with a selected peer group (e.g. GPs, figure 3).

Additional incentives, as e.g. CME-Tools, are necessary to succeed in implementing relevant knowledge or clinical practice guidelines respectively. The main goal of this concept is to create a learning environment for the complex process of medical knowledge transfer. The medical knowledge network evidence.de of Witten/Herdecke University publishes evidence-based guidelines for German physicians, with a special focus on primary care (www.evidence.de). To support the implementation process of these guidelines, the knowledge network has developed an internet platform for CME. A content management system (CMS) facilitates the easy input of different multiple choice questions. One MC-block consists of 10 questions and refers to one of the knowledge network’s clinical practice guidelines (www.medizinerwissen.de).

Existing clinical practice guidelines allowed a swift development of questions concerning each medical indication. All questions were evaluated by an editorial group of physicians consisting of General Practitioners (GPs) and internists and consecutive usability-test with 10 faculty affiliated GPs. Suggestions offered by the users were implemented in an updated version.

Methods

In the future, the medical knowledge network will focus on the following questions:

· Do online platforms for further education facilitate and accelerate knowledge transfer to physicians?
· Would modified versions of such learning platforms be suitable for patients as well?
· Can a CME platform support existing disease management programs (DMPs)?
